Inventor: McDevitt et al. Appl. Ser. No.: 10/522,494

Atty. Dkt. No.: 5936-11111

Amendments to the Claims:

Please cancel claims 1-13, 15-49, 55-68, and 70-80 without prejudice.

This listing of claims will replace all prior versions, and listings, of claims in the above-

captioned application.

Listing of Claims:

Claims 1-49 (cancelled)

50. (original) A method of analyzing an analyte collected on a membrane comprising:

passing a fluid sample across a membrane, wherein the fluid sample comprises an analyte

that is at least partially retained by the membrane;

adding a visualization agent to material collected on the membrane when the fluid sample

is passed across the membrane;

collecting an image of the collected material using white light, at a first wavelength of

light, a second wavelength of light, and a third wavelength of light, wherein the analyte

comprises a color corresponding to the first wavelength of light;

forming a first mask corresponding to an image of the collected material at the second

wavelength of light;

forming a second mask corresponding to an image of the collected material at the third

wavelength of light;

2

Inventor: McDevitt et al.

Appl. Ser. No.: 10/522,494 Atty. Dkt. No.: 5936-11111

subtracting the first mask and the second mask from the image of the collected material in

white light.

51. (original) The method of claim 50, wherein the wavelengths of light are selected from the

group consisting of red, blue and green.

52. (original) The method of claim 50, wherein the collecting the image data and forming the

masks is performed by a computer.

53. (original) The method of claim 50, further comprising determining the amount of analyte

present on the membrane by analysis of the image resulting from subtracting the first mask and

the second mask from the image of the collected material in white light.

54. (currently amended) The method of claim 50, wherein the images are collected using a CCD

detectordigital detection device.

Claims 55-68 (cancelled)

69. (previously presented) A method of sensing an analyte in a fluid comprising:

passing the fluid across a porous membrane configured to capture the analyte on the

porous membrane;

applying a visualization agent to the particles on the porous membrane;

detecting an image of matter captured on the porous membrane with a detector at a

plurality of wavelengths of light;

3

Inventor: McDevitt et al. Appl. Ser. No.: 10/522,494

Atty. Dkt. No.: 5936-11111

detecting an image of matter captured on the porous membrane at a specific wavelength

of light, wherein the specific wavelength of light represents light that is not indicative of

the presence of the analyte.

Claims 70-80 (cancelled)

81. (new) The method of claim 50, wherein the membrane is coupled to a body.

82. (new) The method of claim 50, wherein the membrane is in contact with a membrane

support, and wherein the membrane support is configured to maintain the membrane in a

substantially planar orientation during use.

83. (new) The method of claim 50, further comprising:

passing a background fluid across the porous membrane;

detecting an image of matter captured on the porous membrane after passing the

background fluid through the porous membrane; and

cleaning the surface of the porous membrane;

comparing the image of matter captured on the porous membrane after passing the fluid

containing one or more analytes through the membrane to the image of matter captured

on the porous membrane after passing the background fluid through the porous

membrane.

84. (new) The method of claim 50, wherein the images are collected using a detector, and

wherein a programmable controller is coupled to the detector.

85. (new) The method of claim 50, further comprising applying a stain to the fluid.

4

Inventor: McDevitt et al. Appl. Ser. No.: 10/522,494 Atty. Dkt. No.: 5936-11111

86. (new) The method of claim 50, wherein the visualization agent comprises a stain, wherein the stain is configured to emit light only in a specified portion of the visible spectrum.

- 87. (new) The method of claim 50, wherein the first mask is a binary mask.
- 88. (new) The method of claim 50, wherein the second mask is a binary mask.
- 89. (new) The method of claim 50, wherein the visualization agent comprises a stain, and wherein further the stain is configured to emit light only in a green portion of the visible spectrum, and wherein the second wavelength of light comprises a blue portion of the visible spectrum, and wherein the third wavelength of light comprises a red portion of the visible spectrum, and wherein subtracting the first mask and the second mask from the image of the collected material in white light comprises isolating the matter on the membrane that only emits light in the green portion of the visible spectrum.
- 90. (new) The method of claim 69, wherein the images are collected using a CCD detector.
- 91. (new) The method of claim 69, wherein the images are collected using a CCD detector coupled to a microscope.
- 92. (new) The method of claim 69, wherein the images are collected using a detector, and wherein a programmable controller is coupled to the detector.
- 93. (new) The method of claim 69, wherein the visualization agent comprises a stain, wherein the stain is configured to emit light only in a specified portion of the visible spectrum.
- 94. (new) The method of claim 50, wherein the wavelengths of light are selected from a plurality of visible light wavelengths.

Atty. Dkt. No.: 5936-11111

Response to Notice of Non-Compliant Amendment Mailed April 21, 2006

A. Claims in the Case

Claims 50-54, 69, and 81-94 are pending. Claims 1-13, 15-49, 55-68, and 70-80 have been cancelled without prejudice. Claim 54 has been amended. Claims 81-94 are new.

B. Amendments to the Claims

In the Notice of Non-Compliant Amendment mailed April 21, 2006, the amendment to the claims was not considered compliant because claim 91 had an incorrect status identifier.

Applicant submits each claim has the proper status identifier.

C. Summary

Applicant submits that all claims are in condition for allowance. Favorable reconsideration is respectfully requested. Applicant believes no fees are due in conjunction with this submission.

Respectfully submitted,

Heather L. Flanagan
